

MIAMI SPRINGS POLICE AND FIREFIGHTERS' RETIREMENT SYSTEM

ANNUAL ACTUARIAL VALUATION AS OF OCTOBER 1, 2021

ANNUAL EMPLOYER CONTRIBUTION FOR THE FISCAL YEAR
ENDING SEPTEMBER 30, 2023

May 4, 2022

Board of Trustees
City of Miami Springs Police
and Firefighters' Retirement System
Miami Springs, Florida

Dear Board Members:

The results of the October 1, 2021 Annual Actuarial Valuation of the City of Miami Springs Police and Firefighters' Retirement System are presented in this report.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purpose of the valuation is to measure the System's funding progress, to determine the employer contribution rate for the fiscal year ending September 30, 2023, and to report the actuarial information for Governmental Accounting Standards Board (GASB) Statement No. 67 for the fiscal year ending September 30, 2021. This report also includes estimated GASB Statement No. 67 information for the fiscal year ending September 30, 2022. This report should not be relied on for any purpose other than the purpose described herein. Determinations of financial results associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section B of this report. This report includes risk metrics in Section A, but does not include a robust assessment of the risks of future experience not meeting the actuarial assumptions. A robust assessment of risks was outside the scope of this assignment.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data or other information through September 30, 2021. The valuation was based upon information furnished by the City and the Plan Administrator concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City and the Plan Administrator.

This report was prepared using certain assumptions approved by the Board and prescribed by the Florida Statutes as described in the section of this report entitled "Actuarial Assumptions and Cost Method". The prescribed assumptions are the assumed mortality rates detailed in the Actuarial

Assumptions and Cost Method section in accordance with Florida Statutes Chapter 112.63. All actuarial assumptions used in this report are reasonable for purposes of this valuation.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge the information contained in this report is accurate and fairly presents the actuarial position of the Miami Springs Police and Firefighters' Retirement System as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

Peter N. Strong and Nicolas Lahaye are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. The signing actuaries are independent of the plan sponsor.

This actuarial valuation and/or cost determination was prepared and completed by us or under our direct supervision, and we acknowledge responsibility for the results. To the best of our knowledge, the results are complete and accurate. In our opinion, the techniques and assumptions used are reasonable, meet the requirements and intent of Part VII, Chapter 112, Florida Statutes, and are based on generally accepted actuarial principles and practices. There is no benefit or expense to be provided by the system and/or paid from the system's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material increase in system costs or required contribution rates have been taken into account in the valuation.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,

GABRIEL, ROEDER, SMITH & COMPANY

DISCUSSION OF VALUATION RESULTS

DISCUSSION OF VALUATION RESULTS

Comparison of Required Employer Contributions

The required employer contribution developed in this year's valuation is compared below to last year's results.

	For FYE 9/30/2023	For FYE 9/30/2022*	Increase (Decrease)
Total Required Contribution	\$ 532,404	\$ 512,247	\$ 20,157
As % of Covered Payroll	16.27 %	17.04 %	(0.77) %
Credit for State Revenue	\$ 130,903	\$ 123,217	\$ 7,686
As % of Covered Payroll	4.00 %	4.10 %	(0.10) %
Required Employer Contribution	\$ 401,501	\$ 389,030	\$ 12,471
As % of Covered Payroll	12.27 %	12.94 %	(0.67) %
As % of Total Payroll including DROP participants	10.92 %	11.42 %	(0.50) %
Member Contribution Rate	8.7 %	9.3 %	(0.6) %

*Based on results from May 5, 2021 Actuarial Impact Statement.

The required employer contribution for the fiscal year ending September 30, 2023 has been calculated assuming it will be made in full on October 1, 2022.

The actual amount of State money used and the City contributions deposited for the fiscal year ending September 30, 2021 were \$133,219 and \$464,544, respectively, for a total contribution of \$597,763. The minimum required contribution reflecting actual payment timing was \$597,763.

Revision in Benefits

Three ordinances were adopted since the prior valuation date which had an actuarial impact on the Plan.

Ordinance No. 1119-2021 was adopted on May 10, 2021. This ordinance amended the Plan by increasing the benefit multiplier for members hired on or after October 12, 2014 from 2.5% of average monthly earnings to 3.0% of average monthly earnings. Their maximum benefit also increased from 70% of average monthly earnings to 75% of average monthly earnings. These changes became effective on October 1, 2021 and applied to all years of service. The impact of this ordinance was measured in the May 5, 2021 Actuarial Impact Statement. The prior year results in this valuation report (as of October 1, 2020) reflect this ordinance.

Ordinance No. 1123 – 2022 was adopted on February 28, 2022. Ordinance No. 1122 – 2021 was adopted on December 13, 2021. These ordinances amended the Plan by unfreezing benefits which were earned

prior to October 12, 2014 for those current active members who retire or enter the DROP on or after December 14, 2021. The impact of these ordinance is reflected in the “after changes” column of this valuation report (as of October 1, 2021).

Revisions in Actuarial Assumptions or Methods

There were no changes in actuarial assumptions or methods since the prior valuation.

Actuarial Experience

There was a net actuarial gain of \$2,293,472 for the year which means that actual experience was more favorable than expected. The gain is primarily due to a recognized investment return above the assumed rate of 7.0%. The investment return was 12.2% based on the actuarial value of assets (and 20.4% based on the market value of assets). Demographic experience also contributed to the actuarial gain. Demographic gains occurred primarily due to more retiree deaths than expected as well as due to the recognition of a refund paid to a deferred vested member in a previous fiscal year.

Funded Ratio

The funded ratio, one measure of the Plan’s financial health, is equal to the actuarial value of assets divided by the actuarial accrued (past service) liability. The funded ratio is 103.0% this year compared to 98.9% last year. The funded ratio was 106.3% this year prior to reflecting the plan changes under Ordinance No. 1123 – 2022 and Ordinance No. 1122 – 2021.

Analysis of Change in Required Contributions

The components of change in the required City contribution are as follows:

City Contribution rate last year	12.94 %
Plan Changes	0.77
Amortization of UAAL	(1.12)
Normal Cost Rate	(0.10)
Experience (gain) loss	(1.50)
Change in administrative expense	(0.22)
Change in employee contribution rate	1.40
Change in amount of State revenue applied	<u>0.10</u>
City Contribution rate this year	12.27

Variability of Future Contribution Rates

The Actuarial Cost Method used to determine the contribution rate is intended to produce contribution rates which are generally level as a percent of payroll. Even so, when experience differs from the assumptions, as it often does, the employer’s contribution rate can vary significantly from year-to-year.

Over time, if the year-to-year gains and losses offset each other, the contribution rate would be expected to return to the current level, but this does not always happen.

The Market Value of Assets exceeds the Actuarial Value of Assets by \$4,895,233 as of the valuation date (see Section C). This difference will be recognized over the next four years. Since the Plan is currently fully funded based on the Actuarial Value Assets and since the employer is required to contribute at

least the normal cost each year, this phase-in is not expected to have any impact on the required contribution. It is expected to increase in the funded ratio over time unless there are offsetting market value losses.

Relationship to Market Value

If we were not using an asset smoothing method, the City contribution rate would have been the same at 12.27% of covered payroll. The funded ratio (based on the market value of assets) is 117.2% as of October 1, 2021. The market value-based funded ratio was 104.3% last year.

Conclusion

The remainder of this Report includes detailed actuarial valuation results, financial information, miscellaneous information and statistics, and a summary of plan provisions.

RISKS ASSOCIATED WITH THE MEASURING THE ACCRUED LIABILITY AND ACTUARIALLY DETERMINED CONTRIBUTION

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
3. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
4. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
5. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rate shown on page 1 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2021	2020
Ratio of the market value of assets to total payroll	12.4	11.6
Ratio of actuarial accrued liability to payroll	10.6	11.1
Ratio of actives to retirees and beneficiaries	0.8	0.8
Ratio of net cash flow to market value of assets (Net of DROP)	-3.5%	-4.0%
Duration of the actuarial accrued liability	10.9	10.7

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 2.0 times the payroll, a return on assets 5% different than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 2.5 times the payroll, a change in liability 2% other than assumed would equal 5% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

STATE CONTRIBUTION RESERVE

As of the valuation date, some minimum benefits under Chapter 99-1, Laws of Florida, are not in place. The minimum duty disability benefit should be equal to the accrued pension, a minimum non-duty death benefit payable after 10 years of service should be added, and the normal form of benefit should be changed to 10 years certain and life annuity to meet the minimum required benefits.

For the fiscal years ending September 30, 2021 through September 30, 2023, the City and the Police Officers Union have reached mutual consent with regard to the use of State Chapter Money. All accumulated excess and annual Chapter 185 premium tax monies shall be used to fund the reduction in the employee contribution rate to no more than 9.5% for fiscal years ending September 30, 2021 through September 30, 2023.

Actuarial Confirmation of the Use of State Chapter Money	
1. Accumulated Excess at Beginning of Previous Year	8,859
2. Amount Received for Previous Plan Year	128,127
3. Amount Used in Previous Plan Year	133,219
4. Accumulated Excess as of Valuation Date (Available for Benefit Improvements): (1) + (2) - (3)	3,767
5. Expected Amount to be Received This Plan Year:	128,127

The Accumulated Excess shown in line 4 is being held in reserve to fund the reduction in the employee cost sharing contribution. The reserve is subtracted from Plan assets (see Section C of this Report).

Amortization Schedule

The UAAL is being liquidated as a level dollar amount over the number of years remaining in the amortization period. The following schedule illustrates the expected amortization of the UAAL:

Amortization Schedule	
Year	Expected UAAL
2021	\$ (1,032,370)
2022	(1,024,366)
2023	(1,015,801)
2024	(1,006,637)
2025	(996,831)
2026	(986,339)
2031	(912,291)
2036	-

ACTUARIAL GAINS AND LOSSES

The assumptions used to anticipate mortality, employment turnover, investment income, expenses, salary increases, and other factors have been based on long range trends and expectations. Actual experience can vary from these expectations. The variance is measured by the gain and loss for the period involved. If significant long-term experience reveals consistent deviation from what has been expected and that deviation is expected to continue, the assumptions should be modified. The net actuarial gain (loss) for the past year is computed as follows:

Derivation of the Current UAAL	
1. Last Year's UAAL*	\$ 361,682
2. Last Year's Employer Normal Cost*	411,723
3. Last Year's Employer/State Contributions & Excess Employee Sharing Contributions	613,545
4. Interest at the Assumed Rate on:	
a. 1 and 2 for one year	54,138
b. 3 from dates paid	33,070
c. a - b	21,068
5. This Year's Expected UAAL: 1 + 2 - 3 + 4c	180,928
6. This Year's Actual UAAL (Before any changes in benefits and/or assumptions)	(2,112,544)
7. Net Actuarial Gain (Loss): (5) - (6)	2,293,472
8. Gain (Loss) due to investments	1,738,941
9. Gain (Loss) due to other sources	554,531
10. Change in UAAL due to plan changes	1,080,174
11. This Year's Actual UAAL (After plan changes)	(1,032,370)

* From May 5, 2021 Actuarial Impact Statement.

Net actuarial gains in previous years have been as follows:

Year Ended	Change in Employer Cost Rate	Gain (Loss)
9/30/82	(0.96) %	\$ 116,839
9/30/83	(1.06)	130,253

Actuarial Gain (+) or Loss (-)

Change in Employer Cost Rate

The fund earnings and salary increase assumptions have considerable impact on the cost of the Plan so it is important that they are in line with the actual experience. The following table shows the actual fund earnings and salary increase rates compared to the assumed rates for the last few years:

Year Ending	Investment Return		Salary Increases	
	Actual	Assumed	Actual	Assumed
9/30/1977	---	5.0 %	4.9 %	3.5 %
9/30/1978	7.1 %	6.0	9.9	5.0
9/30/1979	---	6.0	5.2	5.0
9/30/1980	10.2	6.0	12.2	5.0
9/30/1981	7.6	6.0	9.1	5.0
9/30/1982	10.0	7.0	11.7	7.0
9/30/1983	13.3	7.0	4.7	7.0
9/30/1984	7.1	7.0	12.3	7.0
9/30/1985	12.8	7.0	9.0	7.0
9/30/1986	19.5	8.0	6.8	8.0

*Reflects assumed City contribution timing of October 1st beginning after the fiscal year ending September 30, 2013.

ACTUARIAL ASSUMPTIONS AND COST METHOD

Valuation Methods

Actuarial Cost Method - Normal cost and the allocation of benefit values between service rendered before and after the valuation date were determined using an **Individual Entry-Age Actuarial Cost Method** having the following characteristics:

- (i) the annual normal cost for each individual active member, payable from the date of employment to the date of retirement, is sufficient to accumulate the value of the member's benefit at the time of retirement;
- (ii) each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Actuarial gains/(losses), as they occur, reduce (increase) the Unfunded Actuarial Accrued Liability.

Financing of Unfunded Actuarial Accrued Liabilities - Unfunded Actuarial Accrued Liabilities (full funding credit if assets exceed liabilities) were amortized by level (principal & interest combined) dollar contributions over a reasonable period of future years.

Actuarial Value of Assets - The Actuarial Value of Assets phases in the difference between the actual and expected investment earnings over a period of 5 years. The Actuarial Value of Assets will be further adjusted to the extent necessary to fall within the corridor whose lower limit is 80% of the Market Value of plan assets and whose upper limit is 120% of the Market Value of plan assets. During periods when investment performance exceeds the assumed rate, Actuarial Value of Assets will tend to be less than Market Value. During periods when investment performance is less than assumed rate, Actuarial Value of Assets will tend to be greater than Market Value.

Valuation Assumptions

The **actuarial assumptions used** in the valuation are shown in this Section. With the exception of the mortality assumption, which is prescribed by Florida Statutes, all assumptions listed herein were established following the Assumption Study and Experience Review for the Nine-Year Period Ending September 30, 2016, dated December 22, 2017.

Economic Assumptions

The **investment return rate** assumed in the valuations is 7.0% per year, compounded annually (net after investment expenses).

The **Price Inflation Rate** assumed in this valuation was 2.5% per year. The Inflation Rate is defined to be the expected long-term rate of annual increases in the prices of goods and services.

The assumed **real rate of return** over inflation is defined to be the portion of total investment return that is more than the assumed inflation rate. Considering other economic assumptions, the 7.0% investment return rate translates to an assumed real rate of return over inflation of 4.5%.

The assumed rates of salary increase for individual active members are shown below. This assumption is used to project a member’s current salary to the salaries upon which benefits will be based. Part of the assumption is for productivity, merit and/or seniority increase, and 2.5% recognizes inflation.

Years of Service at Valuation Date	Salary Increase Rates		
	% Increase in Salary		
	Merit and Seniority	Inflation	Total Increase
0 - 1	7.00%	2.5%	9.50%
2 - 6	5.00	2.5	7.50
7 - 9	2.00	2.5	4.50
10 - 19	0.75	2.5	3.25
20 +	1.75	2.5	4.25

Demographic Assumptions

The mortality tables used in the valuation are based on the PUB-2010 Headcount Weighted Mortality Tables described below, with mortality improvements projected for healthy lives to all future years after 2010 using Scale MP-2018. No mortality improvement is projected for disabled lives.

	Pre-Retirement PUB-2010 Table	Post-Retirement PUB-2010 Table
Female Healthy	Headcount Weighted Safety Employee Female Table, set forward 1 year	Headcount Weighted Safety Healthy Retiree Female Table, set forward 1 year
Male Healthy	Headcount Weighted Safety Below Median Employee Male Table, set forward 1 year	Headcount Weighted Safety Below Median Healthy Retiree Male Table, set forward 1 year
Female Disabled	N/A	80% Headcount Weighted General Disabled Retiree Female Table; 20% Headcount Weighted Safety Disabled Retiree Female Table
Male Disabled	N/A	80% Headcount Weighted General Disabled Retiree Male Table; 20% Headcount Weighted Safety Disabled Retiree Male Table

These are the same rates as used by the Florida Retirement System (FRS) in their July 1, 2020 Actuarial Valuation Report for Special Risk class members. Florida Statutes Chapter 112.63(1)(f) mandates the use of the mortality tables used in either of the two most recently published actuarial valuation reports of FRS.

FRS Healthy Post-Retirement Mortality for Special Risk Class Members

Sample Attained Ages (in 2021)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	0.42 %	0.20 %	32.50	36.33
55	0.56	0.36	27.73	31.30
60	0.92	0.61	23.14	26.51
65	1.32	0.92	18.87	22.00
70	2.08	1.45	14.86	17.74
75	3.54	2.42	11.27	13.82
80	6.30	4.16	8.19	10.35

This assumption is used to measure the probabilities of each benefit payment being made after retirement.

FRS Healthy Pre-Retirement Mortality for Special Risk Class Members

Sample Attained Ages (in 2021)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	0.16 %	0.11 %	35.66	39.58
55	0.26	0.16	30.58	34.44
60	0.43	0.22	25.63	29.37
65	0.69	0.30	20.86	24.35
70	1.18	0.55	16.34	19.45
75	2.08	1.07	12.10	14.75
80	6.30	4.16	8.19	10.35

This assumption is used to measure the probabilities of active members dying prior to retirement (66.7% of deaths are assumed to be service-connected).

FRS Disabled Mortality for Special Risk Class Members

Sample Attained Ages (in 2021)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	1.45 %	1.25 %	24.04	26.84
55	1.91	1.50	20.88	23.54
60	2.37	1.81	17.92	20.32
65	3.00	2.22	15.07	17.17
70	3.91	2.90	12.39	14.10
75	5.30	4.13	9.87	11.22
80	7.66	6.21	7.60	8.67

The rates of retirement used to measure the probability of eligible members retiring are as shown below.

For employees hired on or after October 12, 2014 the rates are shown below:

Number of Years After First Eligibility for Normal Retirement	Probability of Normal Retirement
0	80 %
1	40
2	40
3	40
4	40
5+	100

For employees hired before October 12, 2014, the retirement rates are shown below:

Number of Years After First Eligibility for Normal Retirement	Probability of Normal Retirement
0	50 %
1	25
2	25
3	50
4	50
5	50
6	50
7+	100

The rate of retirement is 3% for each year of eligibility for early retirement.

Rates of separation from active membership are as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members separating from employment for reasons other than death, disability or retirement.

Years of Service	% of Active Members Separating Within Next Year
0	25.0 %
1 - 3	7.0
4 - 7	4.0
8+	2.5

Rates of disability among active members are as shown below. These are the same rates used for Special Risk Class members of the Florida Retirement System (FRS) in the July 1, 2018 FRS Actuarial Valuation.

Sample Ages	% Becoming Disabled within Next Year			
	Non-Service Connected		Service Connected	
	Males	Females	Males	Females
20	0.020 %	0.000 %	0.010 %	0.000 %
25	0.020	0.020	0.010	0.004
30	0.030	0.020	0.010	0.004
35	0.030	0.030	0.010	0.004
40	0.030	0.030	0.020	0.040
45	0.030	0.060	0.060	0.040
50	0.080	0.110	0.140	0.050
55	0.050	0.110	0.100	0.080

Changes from previous valuation:

There were no changes in actuarial assumptions or methods since the prior valuation.

Miscellaneous and Technical Assumptions

Administrative & Investment Expenses	The investment return assumption is intended to be the return net of investment expenses. Annual administrative expenses are assumed to be equal to the average of the expenses over the previous 2 years. Assumed administrative expenses are added to the Normal Cost.
Benefit Service	Exact fractional service (years and completed months) is used to determine the amount of benefit payable.
Decrement Operation	Disability and mortality decrements operate during retirement eligibility.
Decrement Timing	Decrements of all types are assumed to occur at the beginning of the year.
Eligibility Testing	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Forfeitures	For vested separations from service, it is assumed that 0% of members separating will withdraw their contributions and forfeit an employer financed benefit. It was further assumed that the liability at termination is the greater of the vested deferred benefit (if any) or the member's accumulated contributions.
Incidence of Contributions	Employer contributions are assumed to be made in equal installments at the end of each pay period. Member contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
Marriage Assumption	100% of males and 100% of females are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses for active member valuation purposes.
Normal Form of Benefit	A life annuity is the normal form of benefit.
Pay Increase Timing	Middle of fiscal year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
Service Credit Accruals	It is assumed that members accrue one year of service credit per year.

GLOSSARY OF TERMS

Actuarial Accrued Liability (AAL)	The difference between the Actuarial Present Value of Future Benefits, and the Actuarial Present Value of Future Normal Costs.
Actuarial Assumptions	Assumptions about future plan experience that affect costs or liabilities, such as: mortality, withdrawal, disablement, and retirement; future increases in salary; future rates of investment earnings; future investment and administrative expenses; characteristics of members not specified in the data, such as marital status; characteristics of future members; future elections made by members; and other items.
Actuarial Cost Method	A procedure for allocating the Actuarial Present Value of Future Benefits between the Actuarial Present Value of Future Normal Costs and the Actuarial Accrued Liability.
Actuarially Determined Contribution (ADC)	The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation. The ADC consists of the Employer Normal Cost and Amortization Payment.
Actuarial Equivalent	Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial Present Value (APV)	The amount of funds required to provide a payment or series of payments in the future. It is determined by discounting the future payments with an assumed interest rate and with the assumed probability each payment will be made.
Actuarial Present Value of Future Benefits (APVFB)	The Actuarial Present Value of amounts which are expected to be paid at various future times to active members, retired members, beneficiaries receiving benefits, and inactive, nonretired members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial Valuation	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB No. 67.

Actuarial Value of Assets	The value of the assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets or a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the actuarially determined contribution (ADC).
Amortization Method	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the rate at which total covered payroll of all active members is assumed to increase.
Amortization Payment	That portion of the plan contribution or ADC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.
Amortization Period	The period used in calculating the Amortization Payment.
Closed Amortization Period	A specific number of years that is reduced by one each year, and declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc.
Employer Normal Cost	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Equivalent Single Amortization Period	For plans that do not establish separate amortization bases (separate components of the UAAL), this is the same as the Amortization Period. For plans that do establish separate amortization bases, this is the period over which the UAAL would be amortized if all amortization bases were combined upon the current UAAL payment.
Experience Gain/Loss	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two actuarial valuations. To the extent that actual experience differs from that assumed, Unfunded Actuarial Accrued Liabilities emerge which may be larger or smaller than projected. Gains are due to favorable experience, e.g., the assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, losses are the result of unfavorable experience, i.e., actual results that produce Unfunded Actuarial Accrued Liabilities which are larger than projected.

Funded Ratio	The ratio of the Actuarial Value of Assets to the Actuarial Accrued Liability.
GASB	Governmental Accounting Standards Board.
GASB No. 67 and GASB No. 68	These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.
Normal Cost	The annual cost assigned, under the Actuarial Cost Method, to the current plan year.
Open Amortization Period	An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. In other words, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never completely disappear, but will become smaller each year, either as a dollar amount or in relation to covered payroll.
Unfunded Actuarial Accrued Liability	The difference between the Actuarial Accrued Liability and Actuarial Value of Assets.
Valuation Date	The date as of which the Actuarial Present Value of Future Benefits are determined. The benefits expected to be paid in the future are discounted to this date.

NOTES TO SCHEDULE OF THE EMPLOYER'S NET PENSION LIABILITY

GASB Statement No. 67 (for Fiscal Year Ending September 30, 2022)

Valuation Date: October 1, 2021
Measurement Date: September 30, 2022

Methods and Assumptions Used to Determine Net Pension Liability:

Actuarial Cost Method	Entry Age Normal
Inflation	2.5%
Salary Increases	3.25% to 9.50% depending on service, including inflation
Investment Rate of Return	7.00%
Retirement Age	Experience-based table of rates that are specific to the type of eligibility condition
Mortality	The same versions of Pub-2010 Headcount-Weighted Mortality Tables for Special Risk class members as used by the Florida Retirement System (FRS) for Special Risk class members in their July 1, 2020 actuarial valuation (with mortality improvements projected to all future years after 2010 using Scale MP-2018). Florida Statutes Chapter 112.63(1)(f) mandates the use of mortality tables from one of the two most recently published FRS actuarial valuation reports.

Other Information:

Notes See Discussion of Valuation Results on page 1.

The following plan changes are reflected in the Net Pension Liability as of the measurement date:

- Ordinance No. 1123 – 2022 was adopted on February 28, 2022.
- Ordinance No. 1122 – 2021 was adopted on December 13, 2021. These ordinances amended the Plan by unfreezing benefits which were earned prior to October 12, 2014 for those current active members who retire or enter the DROP on or after December 14, 2021.

SCHEDULE OF CONTRIBUTIONS GASB Statement No. 67

FY Ending September 30,	Actuarially Determined Contribution	Actual Contribution	Contribution Deficiency (Excess)	Covered Payroll	Actual Contribution as a % of Covered Payroll
2014	\$ 650,366	\$ 682,583	\$ (32,217)	\$ 2,111,573	32.33%
2015	712,370	680,547	31,823 *	1,995,510	34.10%
2016	752,596	752,596	-	2,358,240	31.91%
2017	728,190	728,190	-	2,543,260	28.63%
2018	750,523	750,523	-	2,711,544	27.68%
2019	720,433	720,433	-	2,859,624	25.19%
2020	632,668	632,668	-	2,965,962	21.33%
2021	597,763	597,763	-	3,156,347	18.94%
2022**	512,247	512,247	-	3,272,578	15.65%

*Note: A prepaid contribution of \$32,217 was established as of September 30, 2014 resulting from the employer contribution overpayment received during fiscal year 2014. This prepaid contribution was utilized during fiscal year 2015 to cover a portion of the actuarially determined contribution for the year.

** These figures are estimates only. Actual figures will be provided after the end of the fiscal year.

NOTES TO SCHEDULE OF CONTRIBUTIONS

GASB Statement No. 67 (for Fiscal Year Ending September 30, 2022)

Valuation Date: October 1, 2020
Notes Actuarially determined contribution rates are calculated as of the October 1st which is two years prior to the end of the fiscal year in which contributions are reported.

Methods and Assumptions Used to Determine Contribution Rates:

Actuarial Cost Method	Entry Age Normal
Amortization Method	Level Dollar, Closed
Remaining Amortization Period	7 years (single equivalent period)
Asset Valuation Method	5-year smoothed market
Inflation	2.5%
Salary Increases	3.25% to 9.50% depending on service, including inflation
Investment Rate of Return	7.00%
Retirement Age	Experience-based table of rates that are specific to the type of eligibility condition
Mortality	The same versions of Pub-2010 Headcount-Weighted Mortality Tables for Special Risk Class members as used by the Florida Retirement System (FRS) for Special Risk class members in their July 1, 2019 actuarial valuation (with mortality improvements projected for non-disabled lives to all future years after 2010 using Scale MP-2018). Florida Statutes Chapter 112.63(1)(f) mandates the use of mortality tables from one of the two most recently published FRS actuarial valuation reports.

Other Information:

Notes See Discussion of Valuation Results in the October 1, 2020 Actuarial Valuation Report dated May 3, 2021 and the Actuarial Impact Statement dated May 5, 2021.

SINGLE DISCOUNT RATE GASB Statement No. 67

A single discount rate of 7.0% was used to measure the total pension liability. This single discount rate was based on the expected rate of return on pension plan investments of 7.0%. The projection of cash flows used to determine this single discount rate assumed that plan member contributions will be made at the current contribution rate and that employer contributions will be made at rates equal to the difference between the total actuarially determined contribution rates and the member rate. Based on these assumptions, the pension plan’s fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on pension plan investments (7.0%) was applied to all periods of projected benefit payments to determine the total pension liability.

Regarding the sensitivity of the net pension liability to changes in the single discount rate, the following presents the plan’s net pension liability, calculated using a single discount rate of 7.0%, as well as what the plan’s net pension liability would be if it were calculated using a single discount rate that is 1-percentage-point lower or 1-percentage-point higher:

Sensitivity of the Net Pension Liability to the Single Discount Rate Assumption*

1% Decrease	Current Single Discount Rate Assumption	1% Increase
6.00%	7.00%	8.00%
(\$2,545,053)	(\$6,370,840)	(\$9,579,368)

* These figures are estimates only. Actual figures will be provided after the end of the fiscal year.

SECTION F

SUMMARY OF PLAN PROVISIONS

SUMMARY OF PLAN PROVISIONS

A. Ordinances

The Plan was established under the Code of Ordinances for the City of Miami Springs, Florida, Chapter 35, Article II, and was most recently amended under Ordinance No. 1123 – 2022 passed and adopted on February 28, 2022. The Plan is also governed by certain provisions of Chapters 175 and 185, Florida Statutes, Part VII, Chapter 112, Florida Statutes and the Internal Revenue Code.

B. Effective Date

December 13, 1976

C. Plan Year

October 1 through September 30

D. Type of Plan

Qualified, governmental defined benefit retirement plan; for GASB purposes it is a single employer plan.

E. Eligibility Requirements

All full-time police officers; the chief of police has the option to participate.

F. Credited Service

Service is measured as the total number years and completed months from the date of employment to the date of termination, retirement, disability or death. Vacations and other paid leaves of absence are included. Unpaid leaves of absence are not included. No service is credited for any periods of employment for which the member received a refund of their contributions.

G. Compensation/Earnings

Regular basic compensation, excluding overtime or any lump sum payments of unused leave.

H. Average Monthly Earnings (AME)

For members who were employed and within 3 years of Normal Retirement eligibility on October 12, 2014:

- the average of Earnings over the 3 consecutive years of Credited Service which produce the highest average.

For members who are subject to the pension freeze as of October 12, 2014:

- For benefits earned before October 12, 2014: the average of Earnings over the 3 consecutive years of Credited Service prior to October 12, 2014 which produce the highest average.
- For benefits earned on or after October 12, 2014: the average of Earnings over the highest 5 consecutive years of Credited Service out of the last 10 which produce the highest average.

For all other members:

- Average monthly earnings is the greater of (1) average of Earnings over the 3 consecutive years of Credited Service prior to October 12, 2014 which produce the highest average, or (2) the average of Earnings over the highest 5 consecutive years of Credited Service out of the last 10 which produce the highest average.

I. Normal Retirement

Eligibility: Members hired before October 12, 2014 may retire on the first day of the month coincident with or next following the earlier of:

- (1) age 55 and 10 years of Credited Service, or
- (2) 20 years of Credited Service regardless of age.

Members hired on or after October 12, 2014 may retire on the first day of the month coincident with or next following the earlier of:

- (1) age 55 and 10 years of Credited Service, or
- (2) age 52 and 25 years of Credited Service.

Benefit: For members hired before October 12, 2014 who were employed and not participating in the DROP as of December 14, 2021, the benefit is 3.50% of AME for each year of Credited Service up to twenty years and 3.0% of AME for each year thereafter. The maximum benefit is 85% of AME. The minimum benefit is 2.0% per year of service.

Members who were hired before October 12, 2014 and terminated employment or entered the DROP prior to December 14, 2021 have a bifurcated benefit with a frozen benefit piece based on credited service earned and average monthly earnings determined as of October 12, 2014.

For members hired on or after October 12, 2014, the benefit is 3.00% of AME per year of Credited Service. The maximum benefit is 75% of AME. The minimum benefit is 2.0% per year of service.

Members within 3 years of Normal Retirement eligibility on October 12, 2014 continue to accrue benefits at 3.5% of AME per year of service with no cap.

Normal Form
of Benefit: Single Life Annuity, with guaranteed refund of Member contributions and amount of premium tax refund as of the effective date; other options also available.

COLA: None

J. Early Retirement

Eligibility: A member may elect to retire earlier than the Normal Retirement Eligibility upon attainment of age 50 and 10 years of Credited Service.

Benefit: The Normal Retirement Benefit is reduced by 3.0% for each year by which the Early Retirement date precedes the Normal Retirement date.

Normal Form
of Benefit: Single Life Annuity, with guaranteed refund of member contributions and amount of premium tax refund as of the effective date; other options also available.

COLA: None

K. Delayed Retirement

Same as Normal Retirement taking into account compensation earned and service credited until the date of actual retirement.

L. Service Connected Disability

Eligibility: Any member who receives a service-incurred injury, disease or disability which permanently incapacitates the member from performing their regular and continuous duties is immediately eligible for a disability benefit.

Benefit: 66 2/3% of Earnings in affect as of the date of disability less Worker's Compensation and Social Security PIA.

Normal Form
of Benefit: Payable for life or until recovery from disability; other options are also available.

COLA: None

M. Non-Service Connected Disability

Eligibility: Any member who has 10 or more years of Credited Service who receives a nonservice-incurred injury, disease or disability which permanently incapacitates the member from gainful employment is immediately eligible for a disability benefit.

Benefit: The accrued Normal Retirement Benefit taking into account compensation earned, service credited and the member contribution rate on the date of disability, with a minimum benefit equal to 25% AME.

Normal Form of Benefit: Payable for life or until recovery from disability.

COLA: None

N. Death in the Line of Duty

Eligibility: Any member who dies as a direct result of an occurrence arising in the performance of service to the City is eligible for survivor benefits regardless of Credited Service.

Benefit: 25% of Earnings is payable to the spouse; 7 1/2% of Earnings is payable to each eligible child.

Maximum family benefit is 40% of Earnings. Upon death or remarriage of spouse, each child's benefit is increased from 7 1/2% to 15%, with a maximum of 30% to all children.

Normal Form of Benefit: Spouse benefits payable until death or remarriage. Children's benefits are payable until the earlier of death, marriage or age 18 (22 if a full-time student).

COLA: None

O. Other Pre-Retirement Death

Eligibility: Any member who is eligible for Normal Retirement, but dies while still actively employed is eligible for survivor benefits.

Benefit: The designated beneficiary will receive the member's accrued Normal Retirement Benefit taking into account compensation earned and service credited as of the date of death.

Normal Form

of Benefit: Payable immediately as though the member had retired on the date of death and elected the 100% Joint & Survivor option if married or the 10 year Certain and Life option if unmarried.

COLA: None

The beneficiary of a plan member who dies prior to being eligible for Normal Retirement will receive a refund of the member's accumulated contributions with interest.

P. Post Retirement Death

Benefit determined by the form of benefit elected upon retirement.

Q. Optional Forms

In lieu of electing the Normal Form of benefit, the optional forms of benefits available to all retirees are a 10 Year Certain and Life Annuity and the 50%, 75% and 100% Joint and Survivor options.

R. Vested Termination

Eligibility: A member has earned a non-forfeitable right to Plan benefits after the completion of 5 years of Credited Service.

Benefit: The member's accrued Normal Retirement Benefit taking into account compensation earned and service credited as of the date of termination. Benefit is payable at the member's Normal Retirement date.

Normal Form

of Benefit: Single life Annuity; other options are also available.

COLA: None

Members terminating employment with less than 5 years of Credited Service will receive a refund of their own accumulated contributions with interest.

S. Refunds

Eligibility: All members terminating employment with less than 5 years of Credited Service are eligible. Optionally, vested members (those with 5 or more years of Credited Service) may elect a refund in lieu of the vested benefits otherwise due.

Benefit: Refund of the member's contributions with interest. Interest is currently credited at a rate of 4% compounded annually.

T. Member Contributions

The regular Member contribution rate is 9% of Earnings. If the combined City and Member contribution required for a year is less than 14% of covered payroll, the difference under 14% is divided in two and the resulting amount is used to reduce to the City and Member contribution rates for the year. If the combined City and Member contribution required for a year is more than 18% of covered payroll, the excess over 18% is divided in two and the resulting amount is used to increase the City and Member contribution rates for the year. For the fiscal years ending September 30, 2018 through September 30, 2019, the member contribution rate is reduced to a maximum of 12.5%, for the fiscal year ending September 30, 2020, the member contribution rate is reduced to a maximum of 10.5%, and for the fiscal years ending September 30, 2021 through September 30, 2023, the member contribution rate is reduced to a maximum of 9.5%. The reduction in member contribution rate is funded using all accumulated excess and annual Chapter 185 premium tax money. The City contribution is increased to make up for anything the premium tax money does not cover.

U. Employer Contributions

Any additional amount determined by the actuary needed to fund the plan properly according to State laws. Chapter 185 monies received by the City will be deposited into the pension trust fund for the benefit of police officers in the Plan.

V. Cost of Living Increases

Not Applicable

W. 13th Check

Not Applicable

X. Deferred Retirement Option Plan

Eligibility: Plan members are eligible for the DROP upon attainment of Normal Retirement eligibility.

Members must make a written election to participate in the DROP.

Benefit: The member's Credited Service and AME are frozen upon entry into the DROP. The monthly retirement benefit as described under Normal Retirement is calculated based upon the frozen Credited Service and AME.

Maximum

DROP Period: 5 years for members with less than 27 years of service; 3 years for members with at least 27 but less than 35 years of service; 2 years for members with 35 or more years of service.

Interest

Credited: The member's DROP account is credited or debited at an interest rate equal to the actual investment return earned by the pension plan.

Normal Form

of Benefit: The plan member may elect from 1 of the 2 following options:

- (1) Lump Sum, or
- (2) An annuity based upon a retirement option selected by the participant.

COLA: None

Y. Other Ancillary Benefits

There are no ancillary retirement type benefits not required by statutes but which might be deemed a Miami Springs Police Officers and Firefighters Retirement System liability if continued beyond the availability of funding by the current funding source.

Z. Changes Since Previous Valuation

Ordinance No. 1119-2021 was adopted on May 10, 2021. This ordinance amended the Plan by increasing the benefit multiplier for members hired on or after October 12, 2014 from 2.5% of average monthly earnings to 3.0% of average monthly earnings. Their maximum benefit also increased from 70% of average monthly earnings to 75% of average monthly earnings. These changes became effective on October 1, 2021 and applied to all years of service. The impact of this ordinance was measured in the May 5, 2021 Actuarial Impact Statement. The prior year results in this valuation report (as of October 1, 2020) reflect this ordinance.

Ordinance No. 1123 – 2022 was adopted on February 28, 2022. Ordinance No. 1122 – 2021 was adopted on December 13, 2021. These ordinances amended the Plan by unfreezing benefits which were earned prior to October 12, 2014 for those current active members who retire or enter the DROP on or after December 14, 2021. The impact of these ordinance is reflected in the “after changes” column of this valuation report.
